FITZROY® SLIDING DOOR TRACKS

The standard Fitzroy® track assembly is guaranteed against faulty materials and or workmanship directly related to the manufacture of the track for a period of 25 years from date of purchase from the manufacturer **for standard environments and applications**. Refer maintenance notes regarding non-standard environments and applications

The Fitzroy® track assembly is guaranteed for a similar period for performance and operation, always providing the track is installed correctly, complies with Fitzroy Tracks Pty Ltd.'s installation instructions supplied with the track and door weight does not exceed manufacturer's stated capacity.

The Fitzroy® track assembly is **not** guaranteed when damage is caused by faulty installation, abnormal operational usage, automated operation or installation in an environment detrimental to track materials supplied.

This Warranty is void if any alteration, addition or damage is caused to any part of the track assembly or mechanism after manufacture.

Fitzroy® tracks for repair and or replacement under warranty must be returned to Fitzroy Track Pty Ltd.

NOTE:

Fitzroy® Tracks require periodic lubrication (typically every 2–5 years, or more frequently where operating conditions demand). With the door in the open position, apply a small amount of light multi-purpose grease to the exposed ball bearings above the door opening. Operate the door several times to distribute the grease evenly throughout the track. Apply sparingly, as only a small amount is required. Recommended lubricant for standard environments: Caltex EP GreaseC2
